

SE-Overview of It Industry

Name: Goswami Mansi

1. Write the Git command for each: initialize a repo, stage all files, commit with a message, push to remote, pull latest changes.

Ans. Initialize a repository: git init

- **Stage all files:** git add .
- **Commit with a message:** git commit -m "Initial Commit"
- **Push to remote repository:** git push origin main
- **Pull latest changes:** git pull origin main

2. What is the difference between git fetch and git pull? Answer in 2 lines.

Ans. git fetch: downloads the latest changes from the remote repository but does not merge them into the local branch.

git pull: downloads the latest changes and automatically merges them into the local branch.

3. Create a new GitHub repository, push any small text file from your local system, and share the repo link.

Ans. Repository link:

<https://github.com/mansigoswami09/Module-1-Se-Overview-of-it-industry.git>

4. What is the difference between a Fork and a Pull Request?

Answer in 2 lines.

Ans. Fork: A Fork creates a personal copy of another user's repository in your GitHub account.

Pull: A Pull Request is used to request that your changes be merged into the original repository.

5. Create a new branch named feature-test, make one commit on it, and merge it back to the main branch. Write the commands you used.

Ans. `git checkout -b feature-test`
`git add .`
`git commit -m "Added feature"`
`git checkout main`
`git merge feature-test`
